Valve Lifter Seal Modification - Fitting Instructions ET168SP, ET169SP ET187SP

Please refer to MO13.

To fit these parts it will be necessary to extract the lifter rod ET165AS to do this the timing chest will have to be opened and a significant amount of the timing gear removed.

Once this is done remove ET169 and replace with ET169SP using Loctite, fit the seal ET187SP over this and replace the rod ET165AS and reassemble the timing chest. Refit the cable using the new FT168SP tube with the original abutment, ensuring the thinned down section of the tube goes over the seal.
